

SIGNAL CHAOS · MASTER DIRECTION

BRAND SYSTEM

PREMIUM RESTRAINT AT THE CORE

SHARPER ENERGY ON THE SURFACE

SPORT UNDER CONTROL. NOT CHAOS WITHOUT HIERARCHY.

Sparq is a studio, not a single game. The system has to carry an investor deck on Monday and a gameday drop on Sunday without becoming two brands. That is the whole design problem, and everything in this document answers it.

The answer is a **hybrid endorsed architecture**: Sparq owns the grammar, the quality bar and the endorsement. Crown U, Rumble U and Mascot Mayhem own personality, pace and accent. The parent stays supportive so the games can shine.

THE ENDORSEMENT

Reads **A Sparq Game**. Bottom-left or top-right. It is a maker mark, never a second headline. If it competes with the headline, the composition is wrong.

THE TEST

Would this still look like Sparq with the logo removed? If the answer is no, the system has not done its job.

THE DIRECTION IS A DIAL

Signal Chaos is a range, not a look. Every piece sits at a stated stop, and the stop fixes ground, accent, type case, texture and disruption *together*. A brief that does not name a stop has not been briefed.

SIGNAL · CHARGE · CHAOS

01 SIGNAL

USE

Investor decks, corporate site, statements, docs.

GROUND / ACCENT

Bone · Grit Teal, sparingly.

TYPE CASE

Sentence case.

TEXTURE

Grain barely present.

DISRUPTION

None. No slash, no crop, no occlusion.

02 CHARGE

USE

Announcements, reveals, character drops, campaigns.

GROUND / ACCENT

Carbon · Grit Teal or the game's accent.

TYPE CASE

Display all-caps, support sentence case.

TEXTURE

Grain visible, controlled.

DISRUPTION

One slash. Subject may break the frame.

03 CHAOS

USE

Gameday, results, rivalry, in-venue, countdowns.

GROUND / ACCENT

Steel · Outlaw Red or the hottest accent.

TYPE CASE

All-caps, condensed, italic.

TEXTURE

Grain heavy and deliberate.

DISRUPTION

Two slashes max. Type occluded. Hard crops.

LOCKED

HUMAN APPROVAL ONLY

GRIT TEAL

#00A19C

The core equity and primary accent. Never re-mixed, never approximated.

OUTLAW RED

#EB0028

Competitive heat and impact. The second equity, and destructive actions in UI.

THE SPARQ MARK

Supplied files only

Never redrawn, distorted, recoloured or reconstructed from a description.

THE CROWN U MARK

Supplied files only

A prestige property under the Sparq system. Endorsed with restraint.

Changes to any of the four, and to brand tokens generally, need human approval. AI may produce work inside the system. It may not alter the system.

Rumble U and Mascot Mayhem are locked as final. Both are standalone marks: they carry no skull, and their tie to the studio is the endorsement line, not a shared symbol.

FLAME, SKULL, TEETH.

Horizontal is the default for endorsement and wide space. **Vertical** is for square and tall formats. **The mark alone** is for avatars, app icons and any surface where Sparq is already named.

CLEAR SPACE

Equal to the height of the flame tip, all sides.

MINIMUM SIZE

18mm wide horizontal · 8mm mark alone. Below that the teeth close up.

NEVER

Stretch, rotate, outline, add effects, recolour outside the four colourways, place on a mid-tone ground where the red stops separating, or use the mark as the compositional device. Sparq endorses; it does not compete.

HORIZONTAL · PRIMARY

ON LIGHT

REVERSED ON ACCENT

MARK ALONE · VERTICAL

WHO CARRIES THE MARK.

Sparq runs a hybrid endorsed architecture, so the flame skull is not automatic. Tools and applications wear it because they *are* the studio. Games earn their own identity and connect through the endorsement line instead. Deciding which tier a thing sits in is the first branding question, and it settles the mark, the accent and the lockup in one move.

01 PARENT

The studio mark at full strength. It endorses; it does not compete. Bottom-left or top-right, small, never a second headline.

02 GAMES

Own identity, own personality. Crown U substitutes the crown for the skull, echoing the flame silhouette. Rumble U and Mascot Mayhem carry **no skull at all** and connect by attribution alone.

03 APPLICATIONS

Player and athlete surfaces. HomeBase and FlowState carry the skull in the product accent ahead of the wordmark. **Locker Room carries no skull**: the whistle is its mark, and it stands alone.

04 PLATFORM

The fourteen Sparqitect tools. Skull always present, always in the product accent. One shared lockup, set out on the next spread.

ONE LOCKUP, FOURTEEN ACCENTS.

THE RULE

Skull left, wordmark right, optically centred. The name splits: the first half sits in Bone, the second half takes the product accent, and the flame takes that same accent. One colour decision drives the whole lockup.

Home**Base**™

ALSO SUPPLIED

Every tool ships a vertical lockup for square and tall formats. Never rebuild either from the wordmark.

TEN ACCENTS. FIVE ARE ALREADY YOURS.

The platform did not invent fourteen colours. It reuses five core tokens and adds five hues. The flame's gradient is not a separate colour: it is a hue-locked tint and shade of the accent, and it ships inside the artwork. Never rebuild it.

SparqInsights

FLOW BLUE NEW

#59BFFF

--sparq-color-product-flow-blue

FlowState

Contrast, measured on Steel. Seven accents clear 4.5:1 and carry normal text. Outlaw Red 3.60 and Insight Indigo 3.88 are large-text only. Graphite Blue reaches 2.77 and must never set type on a dark ground — it is a fill and a mark colour there, nothing more. On Bone the position inverts: Victory Gold, Pulse Green and Flow Blue all fall below 2:1.

ASSIGN ROLES, NOT PREFERENCES.

Every frame takes **one dominant field colour**, **one hard accent**, and near-white or near-black for structure. Teal and red never run at equal intensity in the same frame. Gradients are controlled support effects, never the background language.

ONE HARD ACCENT

GRIT TEAL

#00A19C

Core equity. Primary accent, selection, live state.

OUTLAW RED

#EB0028

Competitive heat. Impact and destructive actions.

GRAPHITE BLUE

#404BF2

Secondary digital depth. A controlled support accent only.

STEEL

#1E1E24

Deep foreground on bright surfaces. A dark anchor.

CARBON

#2B2B42

Dark surface base. The default premium ground.

BONE

#F4F1EA

Warm light neutral. Light surfaces and reversed type.

GAME ACCENTS.

GAME	ACCENTS
Crown U	Victory Gold #FFD700 · Bone · Steel Prestige. Gold is a support note, never a full-surface default.
Rumble U	Outlaw Red · Carbon · White Compression. Stark contrast, fewer elements, more force.
Mascot Mayhem	Cyber Teal #00F2EA · Victory Gold · Rebel Pink #FF3864 Mischief. Brighter interplay, still organised.

THE ACCENT FIELDS

Game accents extend the parent palette. They never replace Grit Teal or Outlaw Red as the studio's equity, and never appear together with them at equal weight.

CONTRAST.

PAIRING	RATIO	VERDICT
Steel on Grit Teal	5.19	Normal text
White on Outlaw Red	4.60	Normal text
White on Graphite Blue	5.99	Normal text
Steel on Cyber Teal	11.76	Normal text
Carbon on Bone	12.19	Normal text
Steel on Victory Gold	11.82	Normal text
Bone on Steel	14.70	Normal text
White on Grit Teal	3.19	Large only
White on Rebel Pink	3.50	Large only

Normal text needs 4.5:1, large needs 3:1. A pairing not listed here has not been checked. Never bright accent on bright accent for body copy. Never colour alone for status.

BARLOW CONDENSED

Display. Campaign headlines, title cards, promo lockups. Set it oversized and tight: scale jumps, stacked lines, cropped words, italic for speed. All-caps for high-force moments.

Oxanium 00:42.7

HUD, score, technical accent. Scoreboards, timers, stat rails, counters, data strips. Tabular figures always. Never the display layer for a long headline.

Inter carries body copy, product UI, decks and system labels.

The only body default. It has to stay readable at small sizes on a phone held at arm's length, which is the real test.

THE SUBJECT BREAKS THE FRAME.

LAYER	HOLDS	RULE
1 Frame	Thin keyline, inset from the trim	Always present. A window, never a box.
2 Ground	Display headline, slash, texture, environment	Type lives HERE, behind the subject.
3 Subject	One cut-out figure, object or mark	Occludes the headline. Crosses the frame edge.

The subject over the type creates depth without a single shadow. The subject over the keyline stops the frame reading as a card. **Both are required together:** type behind with no break is a flat poster, a break with type in front is a mistake.

With no usable cut-out, do not fake one. Fall back to a Signal-stop composition built from type, rule and negative space.

Schematic. The mark stands in for a cut-out athlete: headline behind it, slash on the ground layer, subject crossing the keyline.

THE MARK IS ALSO THE TOOLKIT.

The logo is never altered. Its *geometry* is the source of the system's compositional devices: three shapes taken from the mark and used at large scale as structure, never as decoration and never as a substitute for the mark itself.

GEOMETRY FROM THE MARK

THE SLASH

From the skull's angular eye. A hard parallelogram at 12° or 18° . The directional wedge, a photo mask, or the division between two colour fields. The system's only diagonal.

THE COMB

From the four square teeth. A rhythmic run of equal ticks along an edge. Metadata rails, stat dividers, timeline marks, score separators. It is what makes a data strip read as Sparq.

THE FLAME CONTOUR

From the outer silhouette. An asymmetric arc used as a large background field, a corner mask or a horizon. Always cropped by the frame so it reads as structure, never a floating blob.

RULES FOR ALL THREE

- Scale them large. A device at logo size is just a small logo.
- Crop them with the frame. Nothing floats.
- One device per composition. Two at the Chaos stop.
- Tint from the ground, never from a fourth colour.
- They never carry the endorsement. The real mark does that.

PHOTOGRAPHY

Gradient-mapped into the frame's own palette rather than left raw: shadows to Steel or Carbon, highlights to the lead accent. Grain over the whole composition, image and ground together, so the layers share one surface. A photograph that still looks like untreated stock has not been brought into the system.

FOUR LAYOUTS COVER ALMOST EVERYTHING.

START HERE, NOT FROM ZERO

ARCHETYPE	JOB	SUBJECT	TYPE	DATA
The Reveal	New character, feature or signing	Full figure, breaking the bottom edge	Name at large scale directly behind the figure	Three lines max, upper left
The Stat Line	Performance, results, milestones	Figure offset to one side, mid crop	Oversized numeral in Oxanium, label in caps beside it	The numbers are the composition. Stack two to four
The Matchup	Two sides, rivalry, comparison	Two figures, or none, split by the slash	Two names stacked, second in the opposing colour	Time, place, channel as a comb rail beneath
The Statement	Quotes, positioning, no subject	None. Type is the subject	Headline fills the frame, ranged left, tight leading	Attribution single line, bottom, small

CONSTANTS

- One focal subject, one lead message, one lead accent.
- The keyline frame, always.
- One data strip. Never two.
- Endorsement bottom-left or top-right, small.
- Asymmetry with alignment discipline. Nothing centred by default.

WHICH IS WRONG

Centred everything with equal margins. Type floating on a photo with a drop shadow. A card around each element. Two rails competing. A subject fully inside the frame with clean space all round, which reads as a product shot rather than a moment.

IF IT DOES NOT EXPLAIN SOMETHING, CUT IT.

MEANING, NOT DECORATION

TOKEN	BEHAVIOUR	USE
motion-wipe-in	Directional translate plus fade on the system angle	Section reveals, lower thirds, social intros
motion-impact-pop	Fast overshoot and settle	Score changes, reward states, rivalry callouts
motion-data-scroll	Linear ticker drift	Standings rails, stat bands, metadata tracks
motion-hero-parallax	Layered depth motion	Web heroes and promo key art
motion-celebration-burst	Elastic burst, tightly controlled	Mascot moments, victory moments

Motion communicates state, sequence, hierarchy or cause and effect. Anything that only makes a screen feel alive is cut. Reduced-motion support is a real alternative, not a disabled animation.

Depth follows one elevation scale, used semantically. A component does not invent its own shadow language: the moment two components disagree, the system stops reading as a system.

A GAME MAY CHANGE THE PRESSURE.

It may never change the grammar.

SAME GRAMMAR · DIFFERENT PRESSURE

SPARQ

PARENT · MOST RESTRAINED

Premium, forceful, sharp, credible. One dominant accent, dark architectural surfaces, zero playful excess.

CROWN U

PRESTIGE · HERITAGE

Rivalry, campus energy, championship ambition. Elevated finish, heroic imagery. Gold supports; it does not lead.

RUMBLE U

COLLISION · COMPRESSION

Confrontation and pressure. Boldest headline, stark contrast, fewer decorative elements, more force. No faux-MMA clichés.

MASCOT MAYHEM

MISCHIEF · ELASTIC

Movement and chaos with discipline. Burst shapes, collision cues, brighter interplay, still cleanly organised.

IF THE WORK SHOWS THESE, IT FAILED.

THE BLACKLIST

01 Purple-to-blue gradient wash, glowing blobs, neon orbs

02 Faint grey text on white or translucent surfaces

03 Frosted panels and glassmorphism everywhere

04 Every block in a card. Cards inside cards

05 Giant rounded icon above every title

06 Per-component shadows and random elevation

07 Motion for motion's sake

08 Generic corporate illustration, flat cheerful people

09 Pure #000000 as the dark default

10 "Unlock", "supercharge", "seamless", "next-gen"

11 "Learn more" and other hedged CTAs

12 Emoji standing in for hierarchy

13 Equal three-column feature grid by default

14 Logo bar plus testimonial carousel plus stat strip

15 Endless FAQ accordion bolted to the footer

16 Three-tier pricing with "Most popular" centred

17 Rocket or empty box plus "Nothing here yet"

18 The same left-copy right-visual hero on every page

These are not stylistic preferences. They are the statistical defaults a model reaches for when a prompt is underspecified, which is why a Sparq prompt must be **constraint-heavy**, not **taste-heavy**. "Make it premium" is not a brief.

THE CONTEXT BLOCK.

Sparq Games is an AI-native mobile gaming studio with a premium hybrid endorsed-brand system. Locked equities: Sparq logo locked, Crown U logo locked, Grit Teal **#00A19C**, Outlaw Red **#EB0028**. Master direction: Signal Chaos, set to the **[Signal / Charge / Chaos]** stop. Use Barlow Condensed for display, Oxanium for HUD and stat accents, Inter for body and UI. One dominant field colour, one hard accent, near-white or near-black for structure. One focal subject, one **12°** or **18°** slash, one data strip. Display type sits behind the subject; the subject crosses the frame edge. Photography is gradient-mapped into the frame's palette, with grain over image and ground together. Avoid purple AI gradients, glassmorphism, nested cards, giant rounded icons, low-contrast grey text, generic esports neon and decorative motion. Respect WCAG AA contrast and reduced-motion behaviour.

PASTE THIS FIRST

WORKFLOW

- Context block first, with the dial stop named.
- State the output format and target surface.
- Ask for three to five variants *before* refining.
- Ask the model to critique its own output against this guide.
- Refine only after the critique. Human review last.

TREAT POLISH AS SUSPECT

High-fidelity output is not evidence of good design. AI work looks finished long before it is solved. The question is never whether it looks polished. It is whether hierarchy, contrast, density and structure survive an audit.

10

BRAND FIT

- Reads as Sparq, or as a generic AI product page?
- Locked colours honoured exactly?
- Locked marks untouched?
- Still strong with the name removed?

HIERARCHY

- One dominant focal point?
- Reading order obvious?
- Over-containerised?
- Template instead of structure?

ACCESSIBILITY

- Body text at 4.5:1?
- Every animation has a reduced-motion path?
- Status carried by colour alone?

PRODUCTION

- Holds at 390px?
- Too many ideas competing?
- Can it be systematised, or only admired?

The standard is not "good enough for AI". If the output feels generic, familiar, soft, templated or over-polished without clear hierarchy, it has failed. If it feels like premium sports energy under control, it is on the right track.

APPROVAL.

DECISION

APPROVAL

Locked marks	Human only
Brand token changes	Human only
New sub-brand identity	Human-led, AI support
Templates inside the system	AI-assisted

OPEN ITEMS

- Sparq skull-variant hierarchy needs documenting.
- Legacy guidelines archive as reference, not rulebook.
